

Build and Validation

Table of Contents

Purpose	1
Prerequisites	1
Common Commands	1
Docker Alternatives	1
Notes	2

Purpose

This project is a static website. Build tasks focus on documentation rendering and standards validation.

Prerequisites

- `make`
- `plantuml` + Graphviz (for diagrams)
- `asciidoctor-pdf` (for PDF docs)
- network access for W3C validators

Common Commands

```
make diagrams
make pdfs
make docs
make validate-html
make validate-css
make validate-all
```

Docker Alternatives

```
make docker-diagrams
make docker-pdfs
```

Notes

- Validation targets use online W3C services.
- Regenerate PDFs after editing `.adoc` files.
