Design Tokens

Core tokens are defined in [html/css/style.css](#) under `:root`.

```
:root {  
  --green: #00a984;  
  --red: #e30612;  
  --ink: #152321;  
  --paper: #fcfffe;  
}
```

Theming Strategy

- keep brand accents in green/red
- use neutral surfaces for readability
- preserve contrast for accessibility
- avoid one-off inline color styles

Safe Customization

1. Change token values first.
2. Verify hover/focus states.
3. Test desktop/tablet/mobile breakpoints.
